### RFI Description

1. Please provide current utility survey information 2. Can existing piping be abandoned in place? 3. Who will provide site mark-out for all utilities and Tennant owned underground? 4. Would underground access pits for valves and saddle taps be acceptable? 5. If underground entry into existing buildings is not available could piping enter above ground on the side of the building? 6. Where does piping responsibilities end? Point of entry? Heat exchanger? 7. Can new piping from distribution pumps be installed externally when exiting the power plant building since the oil tank is obstructing underground installation?

### Senders Recommendations

### REVIEWER'S RESPONSE

- 
1. See attached drawings which include utility survey information for reference only. Contractor is responsible for completing survey and locating utilities that affect their work.
  2. Existing piping may be abandoned in place.
  3. Contractor is responsible for site markout of utilities.
  4. Underground access pits will be considered. Size and location to be coordinated during design review.
  5. If underground entry of piping has the potential to undermine the stability of existing footings or foundation walls, then above ground entry may be considered.
  6. Continue piping to heat exchanger or a point within the building where an accessible connection to existing piping can be completed.
  7. Externally piping at the boiler house to avoid the existing oil tank interference is acceptable.
